

## SITEX® FL

### Description

The SITEX® FL couplings are designed for optimizing the connections between reciprocating engines and driven equipment such as pumps, compressors, generators, etc. SITEX® FL couplings consist of a steel hub and fiberglass reinforced polyamide flange which offers both mechanical strength and dimensional stability in a variety of temperature ranges.

The special teeth allow SITEX® FL couplings to compensate for small misalignments thus avoiding wear. The steel-Polyamide coupling allows maintenance free continuous operation.

**Approved according to EC standard ATEX.**

### Main characteristics and advantages

**Minimum dimensions:** The entire coupling is usually installed inside an engine housing, minimizing the axial dimensions thus reducing the tools required for installation.

**Axial misalignments:** The hub toothing can move freely axially inside the Polyamide flange avoiding axial forces which may arise on the pump shaft.

**Heat stability:** The special fiberglass reinforced Polyamide flange is designed to operate in internal combustion engine environments without air cooling and up to 140° C.

**Maintenance free:** The SITEX® FL joints are maintenance and lubrication free.

**Quick assembling:** Blind assembly makes installation of the SITEX® FL quick and easy.

**Angular misalignments:** The special teeth allow angular misalignment correction, protecting the bearings against angular forces.

**Stiffness:** The stiffness of the SITEX® FL coupling allow for torsionally vibration-free operation.

**The SITEX® FL couplings are used in connections between the flywheels of the internal combustion engines and: hydro-pumps, rotating pistons, and compressor blades.**

### Flange dimensions in accordance with SAE J620

SITEX® FL

## Selection

For a proper sizing a safety factor  $k = 1,3 - 1,6$  must be considered in accordance to the application. Or, the coupling nominal torque must be greater than or equal to the engine torque multiplied by  $k$ :

$$T_{KN} \geq T_N \cdot k$$

$T_{KN}$  = coupling nominal torque

$T_N$  = engine side torque

$k$  = safety factor selected in accordance with the use

## Applications

## k factor

Tandem rollers.....	1,6
Asphalt processing machines.....	1,4
Agricultural machines.....	1,4
Fork lift trucks.....	1,6
Concrete Mixer.....	1,3
Self-propelled cranes.....	1,4
Excavators .....	1,4
Farm tractors.....	1,4
Road working machines.....	1,4

## Assembly

The versatility of the SITEX® FL couplings allows for numerous assembly options with different hub lengths giving consumers the ability to obtain the suitable dimension for every application.

1) Center the flange on the fly-wheel in correspondence to the seat and tighten the mounting screws DIN 912 – 8.8 class in accordance with the torque values shown in the table:

Screw	Ms
M 8	25 Nm
M 10	86 Nm
M 12	355 Nm

2) Center the fly-wheel cover plate in relation to the seat on the engine bellhousing. Tighten the screws.

3) Install the toothed hub onto the pump shaft. For split clamp hub, tighten in accordance with the torques shown in the table.

Coupling	Screw	Ms
42 - 48	M 10	49 Nm
65	M 12	86 Nm
80	M 16	355 Nm

4) Move the pump-hub assembly through the fly-wheel cover plate and up to the stop. Tighten the screws.

## FLD execution

The SITEX® FLD couplings are designed for applications which combine with engine pulleys. These couplings allow for belt replacement without pump disassembly. The operating temperature range is from -25 °C to 100 °C.
