

Series CGLN wide opening parallel grippers

New version

Bores: \varnothing 10, 16, 20, 25, 32 mm

- » High installation versatility
- » Rack and pinion synchronized mechanism
- » Sturdy and accurate construction

Series CGLN's double piston ensures a high gripping force from within a compact unit.

The body of the gripper is complete of grooves to mount magnetic proximity switches (Series CSC).

The wide range of bores and strokes available allows to meet technical requirements at its best.

Repositioning of the gripper is made easier by the 2 calibrated holes provided in the jaws and by the 2 locating pins in the base.

GENERAL DATA

Operation	double effect
Working pressure	2 ÷ 8 bar (3 ÷ 8 bar for \varnothing 10)
Working temperature	5°C ÷ 60°C
Lubrication	not required
Repeatability	± 0.1 mm
Effective gripping force with pressure = 0.5MPa and gripping moment R = 40 mm (\varnothing 10-16-20-25) or = 80 mm (\varnothing 32)	\varnothing 10 = 15N \varnothing 16 = 45N \varnothing 20 = 75N \varnothing 25 = 125N \varnothing 32 = 225N
Air ports	\varnothing 10 - 16 - 20 - 25 = M5 \varnothing 32 = G1/8
Fluid	filtered air, without lubrication. If lubricated air is used, it is recommended to use oil ISO VG32. Once applied, the lubrication should never be interrupted.

Sizing criteria: 1) GRIPPING FORCE ANALYSIS

1

MOVEMENT

The selection of the size of the gripper has to be carried out according to the weight of the object that has to be moved. It is strongly recommended to select a gripper bore able to develop a gripping force at least 20 times higher than the weight of the object. In case of great acceleration or impact during the moving of the object, it is necessary to increase the factor of safety.

EXAMPLE OF CALCULATION (see the diagram on the right)
 Size of the object to be moved (side x side) = 200 mm x 20 mm
 Weight of the object to be moved (Kg) = 0.3
 Factor of safety = 20
 Gripping moment R (mm) = 70
 Working pressure (MPa) = 0.5
 Minimum required gripping force $F_{min} = 0.3 \text{ kg} \times 20 \times 9.8 \text{ m/s}^2 = 60 \text{ N}$

Through the diagrams "Effective Gripping force" we deduce from the above mentioned conditions that the gripping force with the mod. CGLN-20 is 73N, that is 24 times the weight of the object.

The condition requiring that gripping force is at least 20 times higher than the set gripping force is thus satisfied.

Once the gripper size is chosen, select a stroke that allows to have a maximum opening which is wider than the size of the object to be moved.

In the case above the gripper CGLN-20-80 is the right choice.
 $F = 220 \text{ mm} > 200 \text{ mm}$

ACTUAL GRIPPING FORCE (F)

The shown gripping force corresponds to the gripping force of a finger when all fingers (or accessories) are in contact with the load.

F = Pushing force of 1 finger

Sizing criteria: 2) GRIPPING DISTANCE ANALYSIS

The R gripping distance of the object has to meet the parameters of the lines of force which are indicated for each pressure in the diagrams "Effective grip force". If the R distance is exceeded, the load applied will be too much overhanging, thus causing the screws to loosen as well as a reduced component life.

R = gripping distance (mm)
